

All advantages at a glance

- **Low osseointegration** due to equal distribution of compressive stress over the bones (compared to cables and wires)
- **Studs** on the "bone-facing" side prevent the strip from slipping and also reduce osseointegration.
- **High level of resistance**
- **Metal removal much easier** than with cables or wires – **shortens treatment time**
- **Strip can be retensioned.**
- **Universal use** for femur and humerus
- No disruption of **periosteal blood** supply, as proven in extensive studies
- **Improved handling** and easier transfer of force thanks to an **optional cap** for the spindle handle of the universal clamping device

Contact details

If we have piqued your interest in the **LC TITANIUM STRIP** please contact us or your sales representative.
